

Andrew Murphy

My program compiles correctly

My program runs correctly

To my knowledge everything works properly

My code is kind of cluttered in some spots and the use of helper functions would help clean it up, for instance in doMethod a helper function for what should happen in the event of a buy or sell. Other than that though its pretty efficient and should take too much memory. Much better than my first assignment where I had a ton of print statements and buckets.

I spent around 30 hours on this assignment but admittedly forgot to log hours a couple times so that is more of an estimate.

Grading Criteria	Points	Your Expected Score
The program gives the correct output	30	30
The program obeys the constraints	4	4
The program has good design and style	2	2
The writeup is complete	2	2
The output format is correct	1	1
The filename format is correct	1	1
